

Topic: Scenario modeling of the socio-economic development of the Bulunsky ulus of the Republic of Sakha (Yakutia), taking into account economic, climatic, migration factors and the impact of the COVID-19 pandemic

Thesis: Climate change, intensification of trade along the Northern Sea Route, industrial development of minerals, development of engineering infrastructure and population dynamics are the driving forces that determine the socio-economic development of Bulunsky ulus of the Republic of Sakha (Yakutia). The described factors determine the relevance of a comprehensive analysis of possible scenarios for various trajectories of the socio-economic development of the region, depending on the conditions of non-economic factors: ecology, climate, migration dynamics.

The report will also touch on the socio-economic impact of the COVID-19 pandemic at the local level.
